| Ω [*] E | ADVACED SUB ARRAY PROBLEM Pescription You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the basket and the player's position. The ball is shot N times successfully. You are given an array A containing the | 38 |
| 3R23EC0 | from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by multiplying the position with the distance from the basket. | 5 |
| Ser. | Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array. | ,2 |
| ~ ~ ~ ~ ~ ~ | Note: | |
| £00263 | * A subarray is a contiguous part of array. | |
| | * Assume 1 based indexing. | 8 |
| 63BR2 | * The array contains both negative and positive values. | |
| 6 | * Assume the player is standing on a cartesian plane. | 5 |
| | Input Format | 5 |
| R23ECO | - input1:An integer value N representing the number of shots made by the player | |
| St. | - input2 : An integer K representing the size of subarray | ,7 |
| o. | - input3 : An array of integers | ;1 |
